

SHOGO HIDA

Full Stack Engineer | Team Lead | Multilingual (Japanese/English/Spanish)

Tokyo, Japan | +81 70-4217-3529 | shogo.hida@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full stack engineer with 5+ years building distributed systems in Go, TypeScript, and Python. Led development teams, optimized production systems achieving 40% performance gains. Contributed to open source projects including Kubernetes and PyTorch. Native Japanese speaker with business-level English (IELTS 7.5) and conversational Spanish—ideal for global enterprise customer engagement in APAC markets. Unique background spanning software engineering, economics research, and international diplomacy.

TECHNICAL SKILLS

Languages: Go, Python, TypeScript, JavaScript, Ruby, Java

Backend: GraphQL, REST APIs, gRPC, Echo, Gorm, Django, Ruby on Rails

Frontend: Vue.js, Nuxt 3, React, TypeScript

Cloud & Infrastructure: Kubernetes, Docker, AWS (EC2, ECS, RDS, S3, CloudWatch), GitHub Actions, CI/CD

Data & Observability: PostgreSQL, MySQL, Elasticsearch, Redis, Datadog, CloudWatch

Architecture: Clean Architecture, Microservices, System Design, Load Testing

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer & Development Team Sub-Leader

Zeroboard Inc., Tokyo | July 2023 – Present

- Designed and built a GHG emissions analytics dashboard end-to-end for enterprise automotive and banking clients: Go/GraphQL backend (1,500+ LoC, Clean Architecture), TypeScript/Vue.js frontend (20+ components with Nuxt 3), MySQL data layer. Shipped with zero production defects in 3 months.
- Architected an emissions forecasting system processing historical data (1,000+ LoC). Managed stakeholder demos, QA cycles, and production deployment within a 6-month deadline.
- Optimized dashboard response times by 40% through systematic load profiling, identifying 5 critical slow queries, and implementing targeted MySQL indexing and query restructuring.
- Led the operations team (2 direct reports, bi-weekly 1-on-1s): triaged 100+ production incidents, orchestrated hotfix releases and database corrections. Designed CloudWatch + Datadog monitoring dashboards achieving <1-hour incident response SLA.
- Authored 300+ pull requests enforcing Clean Architecture patterns, establishing code review standards and team-wide engineering best practices.

- Pioneered AI-driven engineering workflows: evaluated and deployed Claude AI for the team, then built an automated bug-investigation and alert-analysis pipeline that cut investigation time by 50%.

Software Engineer

Cykinso Inc., Tokyo | November 2021 – June 2023

- Delivered 3 product lines end-to-end (pediatric test kit service, unified platform, healthcare-provider portal) across consumer and B2B healthcare segments using Ruby on Rails, React, and AWS.
- Designed RESTful APIs and database schemas for multi-tenant healthcare data, ensuring HIPAA-aligned data handling and role-based access control.

Software Engineer

Rakuten Inc., Tokyo | October 2020 – October 2021

- Developed and maintained e-commerce platform features serving millions of users in an English-first, globally distributed engineering organization.
- Contributed to microservices architecture using Java and internal frameworks, participating in agile sprints and cross-team code reviews.

OPEN SOURCE CONTRIBUTIONS

Contributed to major open-source projects (10+ merged pull requests), gaining hands-on experience with large-scale codebases and collaborative development workflows:

- Kubernetes (Go) – container orchestration platform
- PyTorch (Python/C++) – deep learning framework
- Transformers / Hugging Face (Python) – NLP/ML library
- LightGBM (C++/Python) – gradient boosting framework
- Flutter (Dart) – cross-platform UI framework

EDUCATION

M.Sc. Development Economics

Hokkaido University, Graduate School of Agriculture | 2013 – 2015

B.Sc. Development Economics

Hokkaido University, School of Agriculture | 2008 – 2013

LANGUAGES

- Japanese (Native)
- English (IELTS 7.5 – Professional working proficiency)
- Spanish (DELE C1)
- Portuguese (Conversational)
